

Development Report — GlobalStock

Date: 20 April 2026

Project: GlobalStock — Industrial Equipment E-Commerce Platform

Prepared by: Mohamed

Summary

Full-day development session focused on front-end feature delivery. Seven major areas were completed: homepage improvements, new catalog pages, a dedicated product detail page, and a fully functional cart and wishlist system.

Work Completed

1. Hero Section — Enhanced Call to Actions

Updated the main homepage hero section with stronger calls to action. Added a **WhatsApp Expert button** (green, with WhatsApp logo) allowing visitors to immediately contact a specialist in one click — reducing friction for B2B buyers who prefer speaking to someone before placing a large order. The existing "Explore our Products" button was preserved and visually refined.

2. Testimonials Section — Real Customer Reviews

Replaced placeholder testimonials with real customer reviews, including names, ratings, and authentic feedback. For industrial equipment where order values are high, real testimonials are a critical trust signal that directly supports conversion.

3. Companies / Partners Section

Updated the "Ils nous font confiance" (Trusted by) section beneath the hero with accurate partner and client company logos, reinforcing GlobalStock's credibility with new prospects.

4. New Catalog Pages

Created three fully functional product catalog pages with filtering, sorting, search, and pagination:

- **Groupes Électrogènes** (/groupes-electrogenes) — generators by type (domestic, industrial, inverter, site, accessories)
- **Solaire** (/solaire) — solar panels, inverters, batteries, heat pumps
- **Machines & Outillage Pro** (/machines-outillage-pro) — pressure washers, compressors, workshop equipment, and more
- **Achat en Gros** (/achat-en-gros) — bulk purchasing page for professional buyers

Each page includes category filters, brand filters, price range, in-stock toggle, promotion filter, and sort options (price, popularity, discount) — enabling buyers to find and compare products independently without needing to contact support.

5. Product Detail Page (/products/[id])

Built a complete product detail page that answers technical questions upfront, reducing pre-sale support requests and building buyer confidence:

- **Image gallery** with thumbnail navigation
 - **Key specifications strip** (power, fuel, voltage, noise level)
 - **Pricing block** with original price, discounted price, and savings badge
 - **Quantity selector** + Add to Cart + Add to Wishlist buttons
 - **Tabbed content:** Description, Full Specifications (two-column table), Downloadable Documents
 - **Contact Specialist section** at the bottom with WhatsApp/call CTAs
-

6. Wishlist Functionality

Implemented a complete wishlist system. B2B buyers typically research and compare multiple products before committing — a wishlist lets them shortlist items and return to order when ready:

- Heart button on every product card across all pages
 - Dedicated **Wishlist page** (/wishlist) showing all saved items
 - Move-to-cart directly from the wishlist
 - Live badge counter on the header heart icon
 - State shared across all pages within the session
-

7. Cart Functionality

Implemented a complete shopping cart system. The cart opens as a slide-in drawer without redirecting the user away from the page, keeping buyers in their browsing flow and reducing cart abandonment:

- Quantity controls per item (increase, decrease, remove)
 - Live subtotal calculation
 - Cart badge counter on the header with live item count
 - Checkout CTA button and "Continue shopping" option
 - Wired to all product pages, category pages, and homepage sections
-
